Lekha Admin & Command Manual

> **Last updated:** 2026-07-07
> **Bot version:** matches `main` branch
> **How to keep this alive:** when you add a new `/` command, new settings key, new admin flow, or new group behaviour, add a row/section here and bump the **Last updated** line. Treat this file as part of the shipped feature.

---

1. The one thing admins do most: let someone in

You do **not** need a user to paste their LINE ID. `/myid` replies with the ID as plain text, so they can select, copy, and paste it to an admin.

Approval options (pick any)

Method	How	Best for
Tap buttons in `/pending`	Type `/pending` → tap ✓ **Allow** on the user's card	Cleanest; no IDs needed
`/approve ``	Approve by ID + auto-send welcome	They already sent you their ID
`/allow ``	Add directly to allowlist (bypasses pending queue)	You sourced the ID yourself
`/promo <code>` (user side)	User redeems `FREETRIAL100` → gets Team/allowed access automatically	Self-serve free trials

When you tap **Allow** on a pending card, the bot:

- moves them from `users:pending` → `users:allowed`
- removes any trial flag
- sends a welcome push if they weren't already allowed
- logs `[admin] pending action via postback { admin, action, targetId }`

---

2. User-facing `/` slash commands

Command	Who	What it does
`/help`	anyone	Help card and command list (also works as `help`)
`/myid`	anyone	Sends your LINE user ID as plain text
`/settings`	allowed/trial/admin	Opens settings menu

Command	Who	What it does
`/settings <section>`	allowed/trial/admin	Jumps to section: `briefing`, `tools`, `persona`, `memory`, `facts`, `locale`
`/settings:section:<section>`	allowed/trial/admin	Postback-style section jump
`/settings:<section>:set:<key>:<value>`	allowed/trial/admin	Direct setting change, e.g. `/settings:briefing:set:morningTime:07:30`
`/settings:toggle:<target>:off`	allowed/trial/admin	Disable `morning`, `evening`, or `checkin`
`/settings:facts:del:<id>`	allowed/trial/admin	Delete a saved fact
`/set <key> <value>`	allowed/trial/admin	Quick typed setting change
`/remember <fact>`	allowed/trial/admin	Save a fact to memory
`/tutorial`	anyone	Restart onboarding tutorial
`/promo <code>`	anyone	Redeem a promo code

`/set` keys and accepted values

Key	Aliases	Value	Example
`timezone`	`tz`	IANA timezone	`/set timezone Asia/Tokyo`
`location`	`loc`	free text	`/set location Bangkok`
`language`	`lang`	`en`, `th`, `auto`	`/set language th`
`morning`	—	`HH:MM` or `off`	`/set morning 07:30`
`evening`	—	`HH:MM` or `off`	`/set evening 21:30`
`checkin`	—	`HH:MM` or `off`	`/set checkin 18:00`
`compact`	`compactat`, `memorycompactat`	integer `1–1000`	`/set compact 15`
`preferredname`	`personapreferredname`	free text	`/set preferredname Jim`

Settings sections and the keys inside them

`briefing`

- `morningBriefingTime` — `HH:MM` or `null`
- `eveningSummaryEnabled` — boolean
- `eveningSummaryTime` — `HH:MM`
- `taskCheckInEnabled` — boolean
- `taskCheckInTime` — `HH:MM` or derived from evening −30 min

- `inboxBriefingEnabled` — boolean
- `briefingTopics` — object of topic IDs → boolean (stocks, wellness, politics, crime, sports, business, entertain)
- `briefingLength` — `"Headlines"`, `"Bullets"`, `"Full"`
- `briefingLanguage` — `"English"`, `"ไทย"`, `"EN + ไทย"`
- `briefingChannels` — `{ line, email, push }` booleans

`tools`

- `tools` — `{ todo, reminders, calendar, email, drive }` booleans
- `disabledCategories` — derived array; do not edit directly

`persona`

- `personaTone` — `"Warm"`, `"Professional"`, `"Playful"`
- `personaAddressing` — `"First name"`, `"Khun"`, `"Sir / Madam"`, `"No address"`
- `personaPrimaryLang` — `"English"`, `"Thai"`
- `personaVoiceMatch` — boolean
- `personaPreferredName` — string or null

`memory`

- `memoryEnabled` — boolean
- `memoryCompactAt` — integer, messages between compactions

`locale`

- `timezone` — IANA string
- `location` — free text
- `language` — `en`, `th`, or null (auto)

`facts`

- Displays saved facts with **Delete** buttons.
- Facts have: `id` (short hex), `category`, `content`, `createdAt`, `updatedAt`, optional `confidence`, optional `priority`.
- Default category when added via `/remember` is `other`.
- Categories used internally: `preferences`, `people`, `habits`, `deadlines`, `context`, `health`, `work`, `other`.

---

3. Admin-only `/` slash commands

Command	Arguments	What it does
`/allow <LINE_USER_ID>`	full LINE ID	Adds to allowlist, removes trial
`/remove <LINE_USER_ID>`	full LINE ID	Removes from allowlist
`/users`	—	Lists every known user with status tags: `ADMIN`, `allowed`, `trial`, `team`
`/pending`	—	Shows pending queue as Flex cards with **Allow / Deny** buttons
`/approve <LINE_USER_ID>`	full LINE ID	Approve from pending + send welcome
`/deny <LINE_USER_ID>`	full LINE ID	Remove from pending queue
`/allowgroup <GROUP/ROOM_ID>`	`C…` or `R…` ID	Allow a group/room
`/removegroup <GROUP/ROOM_ID>`	`C…` or `R…` ID	Remove group/room from allowed list
`/groups`	—	Shows allowed + discovered groups with **Allow / Remove** buttons
`/promo create <code> [allowed|team] [uses] [days]`	e.g. `/promo create DEMO team 10 7`	Creates a promo code
`/promos`	—	Lists all promo codes
`/promo delete <code>`	code	Deletes a promo code
`/status <LINE_USER_ID>`	full LINE ID	Full diagnostic: admin/allowed/trial/team, settings, locks, last activity
`/audit <LINE_USER_ID> [n]`	full LINE ID, optional count `1–100`	Last `n` tool-call audit entries (default 5, max 100)
`/force-briefing <LINE_USER_ID> [morning|evening]`	full LINE ID, kind	Manually push a briefing/summary

Why `/users` now shows more than just "allowed"

A user can be in several states at once:

- **ADMIN** — in `ADMIN_LINE_USER_ID` env var; bypasses all gates.
- **allowed** — in `users:allowed` Redis set.
- **trial** — in `users:trial` (e.g. started a free trial but hasn't redeemed a promo).
- **team** — in `users:team` (e.g. redeemed `FREETRIAL100` or paid Team plan).

So you will now see lines like:

```
 James (U9b7…) [ADMIN]
Keno (U4e1…) [allowed]
dang (Ue00…) [trial]
SKY~💕 (U898…) [trial]
```

```
Pol (U7c4…) [ADMIN]
pang (Ub81…) [allowed]
```

This is why Keno and Pang show `allowed` — they explicitly used `/promo FREETRIAL100`, which writes them into `users:allowed` (or `users:team` depending on the code grant). James and Pol are `ADMIN`. Dang and Sky are on free trial (`trial`).

---

4. Group management

How the bot knows about groups

- When the bot is **added to any group or room**, it stores the ID in `groups:discovered` .
- If the inviter is an **admin**, the group is automatically added to `groups:allowed` .
- If the inviter is **not an admin**, the group sees the Team paywall, and every admin gets a push notification with **Allow / Ignore** buttons.
- When the bot leaves or is removed, the group is removed from `groups:allowed` and `groups:discovered` .

How to allow a group for free

Method	Steps
Tap the admin notification	When a non-admin adds the bot, admins get a Flex card. Tap ✓ **Allow**.
`/groups`	Type `/groups` → see discovered groups → tap ✓ **Allow**.
`/allowgroup ``	Type the exact group/room ID.
Add to `ADMIN_GROUP_IDS`	Vercel env var; permanent, survives restarts.

How users talk to the bot in a group

LINE does **not** show bots in the group `@` autocomplete, so members cannot pick Lekha from the mention picker. They can still invoke the bot with:

1. `@Lekha` **typed manually** at the start of a message (case-insensitive).
2. **The name at the start** — e.g. `Lekha, what's the weather?` .
3. **A reply to any of the bot's messages** — swipe/right-click the bot's message and hit reply; the bot treats that as a direct invocation, no `@` needed.

> Tip: the bot's join message already tells members they can mention `@Lekha` or reply to its messages.

`/groups` output

- ✅ **Allowed groups** — already authorised (`groups:allowed` + `ADMIN_GROUP_IDS`).

- ⏳ **Discovered, not allowed** — bot is in the group but it cannot respond yet. Tap **Allow** to activate.
- Each card shows the full group/room ID and a short prefix, plus an action button.

---

5. Promo codes

Promo codes live in Redis at `promo:<CODE>`.

Field	Meaning
`grant`	`"allowed"` (personal access) or `"team"` (Team access)
`usesLeft`	how many redemptions remain
`expiresAt`	epoch ms expiration
`createdBy`	admin LINE ID
`usedBy`	set of user IDs who already redeemed

`/promo FREETRIAL100` is the current self-serve code. When a user redeems, the bot logs:

```
[promo] redeem attempt { userId, code, ok, grant, error }
```

---

6. Audit & status

`/audit <id> [n]`

- Shows the last `n` turns for a user (default 5, max **100**).
- Each entry includes: timestamp, hint, user message, every tool call (input/output), errors, and the final reply.
- Use this to trace exactly what the bot did and why.

`/status <id>`

- Admin / allowed / trial / team flags
- Timezone, morning/evening/check-in times
- Whether LINE pushes are enabled
- Last briefing/summary timestamps
- Today's push locks
- Last activity relative time

---

7. Push vs reply: when the bot uses each

Scenario	Method	Counts against push quota?
Answering a message you just sent	**reply** (uses replyToken)	No
Proactive briefings, reminders, alerts	**push**	Yes
Admin notifications for new groups	**push**	Yes
Welcome message after `/approve`	**push**	Yes
`/myid`	**reply**	No
`/pending`, `/users`, `/groups`	**reply**	No

We prefer replies whenever there is a reply token, to save push quota.

---

8. Fact storage deep reference

Facts are stored per user at `user:{userId}:facts:v2`.

Fact shape

```
{
  id: string;           // short hex, e.g. "a1b2c3d4e5f6"
  category: "preferences" | "people" | "habits" | "deadlines" | "context" | "health" | "wo
  content: string;      // max 1000 chars
  createdAt: number;
  updatedAt: number;
  confidence?: number;  // optional 0–1
  priority?: number;    // optional; higher = shown first in prompt
}
```

How facts are added

- `/remember <fact>` → category `other`
- Background extraction after every `memoryCompactAt` turns → categorized automatically
- Document / image analysis can create facts with higher `priority`

How facts are removed

- Settings → **Facts** section → tap **Delete** on a fact card (`/settings:facts:del:<id>`)
- There is no bulk-delete command by design

---

9. Changelog / future additions

Use this section as a running log. Add a bullet every time the manual is updated.

- **2026-07-07** — Converted `=` commands to `/` commands; added `/myid` plain-text reply; added group discovery and admin `/groups` Flex cards; increased `/audit` max to 100; improved `/users` status logging; created this manual.

---

10. Quick admin cheat sheet

```
/users              → see everyone and their tags
/pending            → approve/deny with buttons
/allow <id>         → add someone directly
/approve <id>       → approve from pending + welcome
/groups             → see/allow discovered groups
/allowgroup <id>    → allow a group by ID
/promos             → list promo codes
/promo create X team 50 30
/status <id>        → full user diagnostic
/audit <id> 20      → last 20 turns
/force-briefing <id> morning
```
